

DOCAVE WEBSITE MIGRATOR

FOR MICROSOFT® SHAREPOINT® MIGRATION

Migrate. Automated, high performance web content migration to Microsoft SharePoint Server.

KEY BENEFITS

CONTENT
MANAGEMENT
IMPROVEMENT

Reduce management and licensing costs, optimize system resources, and accelerate end-user adoption by unifying all web-based assets in SharePoint with precision and speed.

COLLABORATION
ADOPTION

Utilize valuable legacy content in your SharePoint platform to unleash its full web content management and collaboration capabilities, transforming static web resources into collaboration-driven assets.

BUSINESS-DRIVEN
DEPLOYMENT

Optionally migrate web-based content to offline local stores to perform full testing prior to production deployment. Save and reuse customized mapping schemas to accelerate migration of multiple pages and sites.

EASE MIGRATION TO SHAREPOINT FROM WEBSITES

DocAve Website Migrator provides a reliable, efficient, and cost-effective solution for the organized and lossless transfer of web content into Microsoft SharePoint 2013, SharePoint 2010, or SharePoint 2007. With comprehensive mapping of legacy artifacts to SharePoint elements, fully automated page link management, and optional remote migration using web services, this powerful tool drastically reduces the costs and stress normally associated with web application migration.

TECHNICAL OVERVIEW

- Crawl source web content prior to migration and generate integrated reports to provide itemized analysis of all elements in the source site, listing key information including crawl status, migration result, conflict status, and explanatory comments
- Migrate any HTTP/HTTPS accessible web content into SharePoint, including all code, HTML regions, embedded tables, related documents, and associated images – granularly or in bulk
- Preview all migration content, documents, and images prior to migration execution
- Discover, sort, filter, search, and analyze all source content types, page templates, and site hierarchies via a single interface
- Fully map all source elements to the existing SharePoint framework using default site hierarchy maps or a customizable mapping interface to utilize SharePoint's top link bars, quick launch bar, lists, libraries, and calendars
- Automated updates of all page links streamlines management and eliminates risk of human error
- Create customized, reusable source-to-SharePoint mapping schemas to streamline the migration of multiple pages and sites
- Transfer the web content to a local offline environment for full testing before migrating to the production environment, then upload migration data to production with a single click
- Use Website Migrator via web services to migrate to SharePoint environments with no need to install an agent on the SharePoint web front end server

Point-and-click migration simplifies the transfer of content into SharePoint.
